pay for outcomes

An Ecosystem Approach

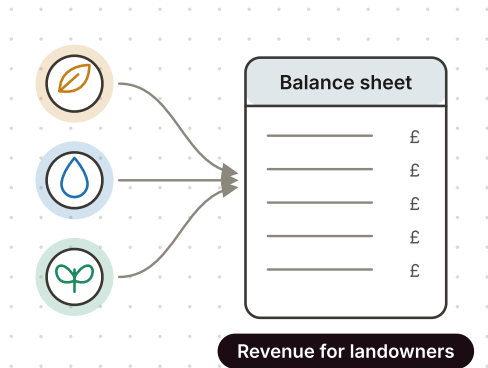

Great Yellow connects the people needed to restore nature at scale.

Nature Markets: Valuing Ecosystem Services

Nature markets are putting ecosystem services on the balance sheet, in the UK and globally.

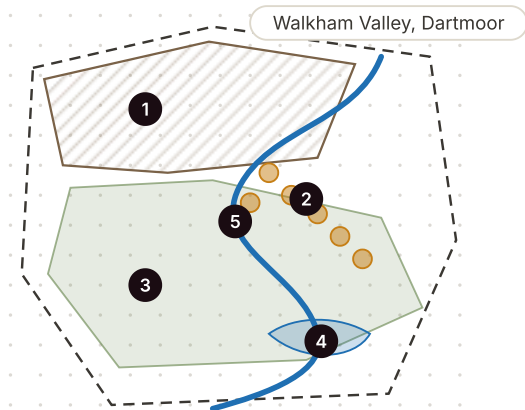

For the first time, habitat restoration and protection generate tangible revenue for landowners, while delivering long-term value for businesses across the UK.

Walkham Valley Project Vision

To create a climate-resilient landscape, where free-flowing rivers, healthy soils, diverse grasslands, and a rich mosaic of woodlands and peatlands sustain abundant wildlife, store carbon, and buffer against flood and drought.

- 1 **Peatland and mire:** rewet ~700 ha of degraded bog
- 2 **Woodland:** ~100 ha back into management, ~60 ha new, scattered trees on ~400 ha
- 3 **Grassland and grazing:** enhance ~1,400 ha
- 4 **Wetland and wet grassland:** restore ~90 ha
- 5 **River and floodplain:** reconnect, remove fish barriers, slow the flow

Natural Capital in Walkham Valley

Natural capital is the living and non-living parts of ecosystems that produce goods and services of value to people. Walkham Valley provides:

- | | |
|--|--|
|  Carbon storage |  Clean water |
|  Flood and drought resilience |  Habitat for wildlife |
|  Food |  Timber |
|  Recreational access |  Cultural and spiritual value |
|  Water supply |  Air filtration |

The Carbon Market

Nature project

Sequesters or avoids CO₂

Carbon credit

1 credit = 1 tCO₂e

Registry

Verified and issued

Buyer

Offsets what it cannot cut

Nature leads

Nature credits dominated the voluntary carbon market in 2024 and 2025.

Wider appeal

Buyers favour nature-based solutions for their social and environmental value.

Premium price

Co-benefits such as species, water and culture sell at a premium.

Who Is Buying Carbon in the UK?

Significant carbon purchasers in the UK include:

Bupa

Healthcare

**Lloyds Banking
Group**

Bank

Aviva

Insurer

The Met Office

Public body

**Devon County
Council**

Local authority

Offtake volumes by project sector: Allied Offsets

Walkham Valley's Peatland Carbon Potential

~700 ha

degraded peat
releasing CO₂

~90,100

Peatland Code
credits, 20
years

£4.9M to

£6.8M

indicative, 20
years

Cool baseflows protect juvenile salmon

Flood management: slows runoff, cuts peaks

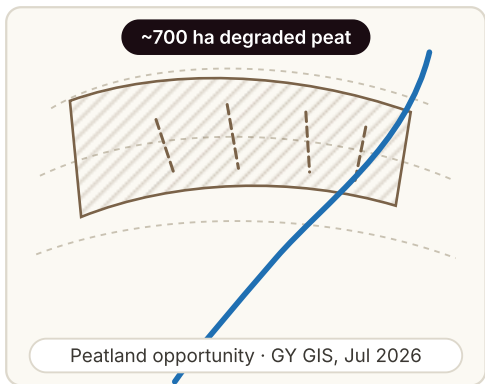

Drought protection: releases stored rain

Water quality: less sediment

700 ha × 20 years = 106,000 tCO₂e, less a 15% buffer = ~90,100 credits. Price basis: the range implies £54 to £75 per credit; ~£26 is today's reference price. The Carbon lead confirms the basis before this deck is sent.

Walkham Valley's Woodland Carbon Potential

502 ha

woodland
creation
opportunity

~121 ha

improved forest
management

£0.8M to

£3.3M

indicative, 20
years

Of the 502 ha mapped, the vision commits ~60 ha of new broadleaved woodland and scattered trees across ~400 ha.

Shade and cool water for salmon

Flood management: more infiltration

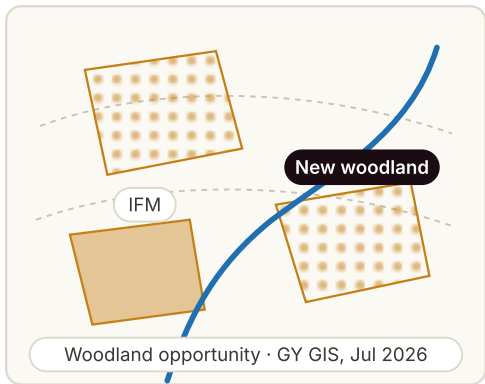

Carbon: Woodland Carbon Code credits

Water quality: roots filter pollution

502 ha × 20 years = 25,490 tCO₂e, less a 20% buffer = ~20,390 credits.

Soil Carbon Opportunity: Grassland

~1,400 ha
grassland to restore

Restoring this grassland could make Walkham Valley eligible for an improved soil management carbon protocol, covering:

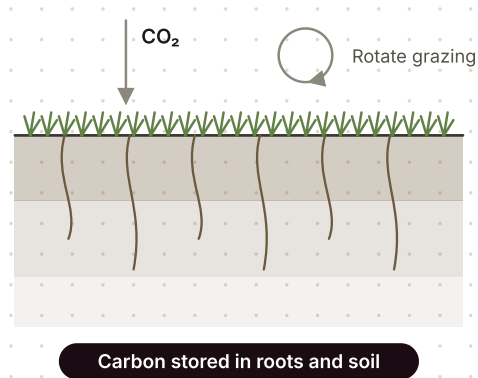

Grassland enhancement: more species, varied sward

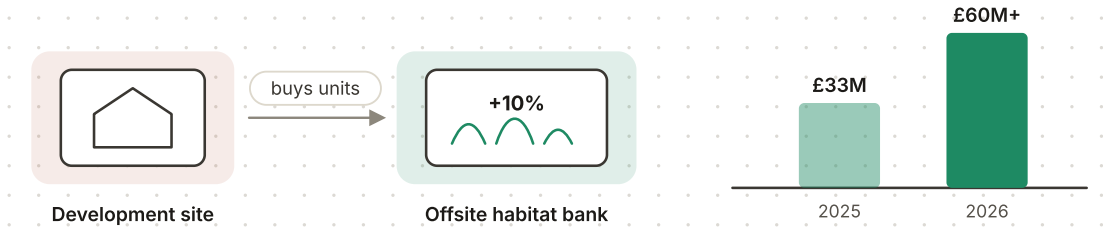

Conservation grazing: adaptive, rotational

No revenue figure yet: protocol eligibility to confirm.

Biodiversity Net Gain (BNG)

A compliance market created by the English Government in 2024: most new developments must show a 10% measurable uplift in biodiversity, and buy offsite units when they cannot.

NSIP BNG compliance is expected to formalise in November 2026; National Grid and National Highways have published large tenders for units.

Supply and Demand Insights, Walkham Valley

Current demand in Devon is somewhat low. Geospatial analysis shows unit demand at:

644.54

habitat units required in total

308.29

Local LNRS

336.25

Neighbouring LNRS

Source: BNG demand across planning applications in the project area. Submitted applications only; approval outcomes and future demand are not captured.

Voluntary Biodiversity in Walkham Valley

Bespoke deal

A company funds an agreed biodiversity outcome.

Voluntary credits

Sold at a standard price, for example on Earthly.

Frameworks: BNG metric, Credit Nature, Wallacea, Wilder Carbon, Verra CCB.

Marsh fritillary

Priority butterfly of wet grasslands

Dartmoor pony

The iconic native breed

Water vole

Threatened by American mink

Breeding waders

Curlew and other red-listed birds

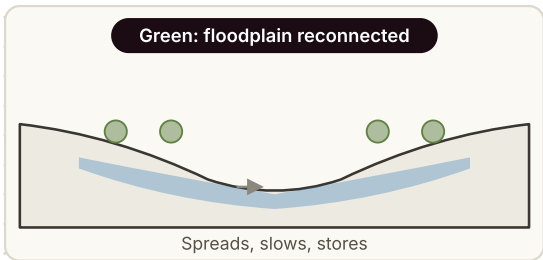

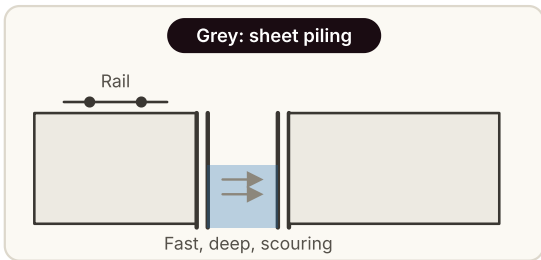

Blue ground beetle

In 15 UK ancient woodland sites

Natural Flood Management

Flooding is the UK's largest environmental challenge. Government has committed £2.65bn to flood defences over two years, and infrastructure owners are turning to nature-based solutions.

Case study: Network Rail in Evenlode Landscape Recovery, floodplain reconnection in place of sheet piling on a rail embankment. Public summary; internal photos removed for this audience.

Downstream Flood Risk, Walkham Valley

GPAP downstream flood-zone analysis gives a concrete beneficiary base for natural flood management:

386

properties vulnerable

14

businesses, incl. South West Water

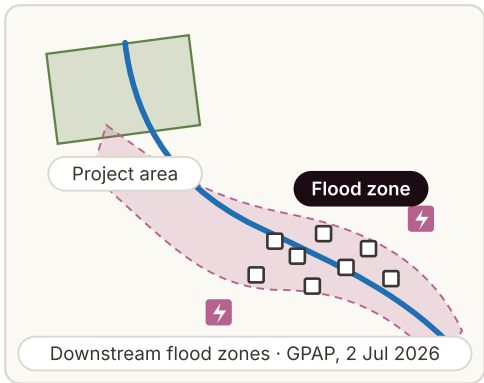

4

electricity substations

£56.6M

economic assets at risk

334 buildings sit in the flood zone. Source: GY GPAP flood-zone report, 2 Jul 2026

Water Quality and Replenish Markets

Water quality

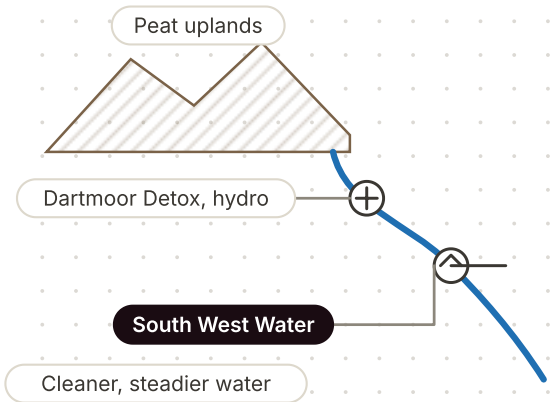

Water companies pay for nature that filters water near their extraction sites.

Replenish

Nature-based solutions that steady supply against drought, erosion and overflows.

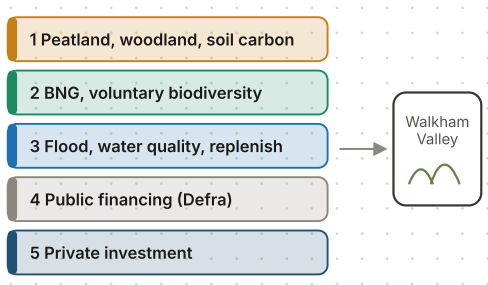

Consent holders: South West Water; Dartmoor Detox Ltd, hydro-electric power. **Supply chain resilience:** drought, fire, soil.

The Blended Finance Approach

De-risking returns by pursuing several markets at once.

Revenue from five sources, with support from investors and government, makes Walkham Valley investable rather than grant dependent.
